

# ANON HOSSAIN

Junior AI Engineer | Data Analytics & Automation

Phone: +880 17410-97116 | Email: anonhossain1710@gmail.com | GitHub: github.com/anonhossain | Hugging Face: huggingface.co/anonhs | Medium: medium.com/@anonhossain1710

## PROFESSIONAL SUMMARY

---

Data and AI professional with 4+ years of experience designing data-driven automation, reporting, and analytics solutions. Hands-on with SQL, Python (FastAPI), and Excel to build scalable pipelines, automate reporting, and extract actionable insights from structured and unstructured data. Experienced in data preprocessing, information extraction, and visualization, with strong stakeholder management and documentation skills. Adept at collaborating with cross-functional teams to improve operational efficiency and support data-informed decision-making.

## CORE SKILLS

---

### Data & Analytics

- SQL (querying, joins, aggregations)
- Data pre-processing & cleaning
- Information extraction from text/documents
- Data visualization (dashboards & reports)
- Reporting automation (Excel/Google Sheets)

### Programming & Tools

- Python (FastAPI, Pydantic, orchestration patterns)
- Excel & Google Sheets (data extraction, tabular reporting)
- Git & GitHub (version control)
- n8n (workflow automation)
- Telegram Bot API, Google Cloud (Drive, Sheets, Gmail)
- SQL, Linux, Redis, Celery

### Business & Collaboration

- Business analysis & requirement gathering
- Stakeholder management & cross-functional collaboration
- Process documentation & governance
- Problem solving & analytical thinking
- Presentation & communication

### System & Solution Design

- Workflow & pipeline design (data & AI)
- Monolith & microservices architecture
- Orchestration-based design patterns
- Class diagrams & structured system documentation

## PROFESSIONAL EXPERIENCE

---

### Junior AI Engineer Join Venture AI | On-site

June 2025 – Present

- Delivered AI-powered automation solutions for multiple clients, as measured by reduced manual effort in data processing and reporting, by analyzing business requirements and mapping them to scalable AI and data workflows.
- Improved maintainability and development efficiency of analytics pipelines, as measured by faster iteration cycles and fewer integration issues, by designing end-to-end architectures, class diagrams, and coding standards for data- and AI-driven systems.
- Accelerated feature delivery and debugging for analytics and automation use cases, as measured by reduced development and issue-resolution time, by applying orchestration-based patterns to complex pipelines handling multi-step data processing.
- Enhanced cross-team coordination and delivery reliability, as measured by on-time deployment of production-ready systems, by coordinating 20+ engineers across AI, backend, and DevOps teams and aligning them on data flows, SLAs, and monitoring needs.
- Strengthened solution fit to client constraints, as measured by adherence to cost and performance requirements, by selecting appropriate open- or closed-source models and infrastructure based on scalability, latency, and budget.

### Head of Documentation / USG of Documentation Daffodil International University Model United Nations (DIU MUN)

April 2022 – March 2025

- Managed documentation and operational data for a national conference (~150 delegates), as measured by zero critical documentation delays, by leading end-to-end document workflows across 67 organizing members.
- Increased process transparency and control over approvals and budgets, as measured by timely clearance of proposals, by standardizing templates and tracking systems for approvals, budget proposals, and official communications.
- Improved cross-functional operational efficiency, as measured by on-schedule completion of time-sensitive tasks, by coordinating documentation across Finance, Transport, Hospitality, and other teams using structured tracking tools.
- Reduced coordination errors and rework, as measured by fewer follow-up iterations on documents, by maintaining accurate, version-controlled records and clear documentation timelines.
- Enhanced overall event execution quality, as measured by smooth conference operations and timely communication to stakeholders, by implementing disciplined documentation practices and centralized information management.

## SELECTED ANALYTICS & AUTOMATION PROJECTS

---

### AI Resume Analyzer & HR Automation System      Tech: Python (FastAPI, Pydantic), SQL (concepts), Excel, Orchestration-based design

- Reduced HR screening workload, as measured by automated extraction and structuring of key candidate data, by building a FastAPI-based system that parsed resumes and produced standardized profiles.
- Improved decision-making for HR teams, as measured by availability of match scores and structured outputs, by designing logic to calculate candidate-JD relevance and output results into Excel-compatible formats.
- Enhanced reliability and maintainability of the analytics workflow, as measured by fewer runtime errors and easier updates, by using Pydantic for schema validation and an orchestration-based design pattern for clear pipeline stages.

## Community Emergency Response Automation Tech: n8n, Telegram Bot API, Google Drive, Google Sheets, Gmail

- Eliminated manual routing delays for incident reports across three residential blocks, as measured by real-time message delivery to responsible authorities, by automating data collection and routing using n8n and Telegram Bot API (webhooks, conditional logic).
- Improved visibility into incident data, as measured by centralized, structured logs, by integrating Google Sheets as a live, queryable store for incident details and statuses.
- Strengthened data integrity and security, as measured by fewer incorrect or incomplete submissions, by adding automated identity checks and validation logic in the workflow.

## AI Podcast Content Shortening System Tech: Python (audio/text processing), orchestration workflows

- Increased content consumption efficiency, as measured by compressing 50-minute podcasts to 30–40% of original length, by designing a system to segment, summarize, and reconstruct audio while preserving core narrative flow.
- Preserved 100% original audio integrity, as measured by absence of audio artifacts or misaligned sentences, by carefully handling timestamps, multi-speaker transitions, and sentence boundaries in the processing pipeline.
- Enabled scalable processing of long-form audio, as measured by consistent output quality across varying podcast episodes, by implementing modular processing stages that handled transcription, summarization, and assembly.

## EDUCATION

---

**M.S. in Software Engineering** 2025 – Present  
Daffodil International University

**B.Sc. in Software Engineering** 2021 – 2025  
Daffodil International University

## CERTIFICATIONS

---

**IBM Data Science Professional Certificate**  
(Curriculum exposure: Python, data analysis, data visualization, SQL, and basic machine learning)

## ACHIEVEMENTS

---

- **1st Runner-Up**, 3-Minute Thesis Competition – Daffodil International University / University of Queensland  
Topic: *"HR Helper: AI Solution for HR"* (focused on automating HR analytics and decision support).
- **2nd Runner-Up**, 4th DIU Data Science Summit 2024 (National Project Showcase)  
Project: *"AI ATS Resume Analyzer & Extractor"* (data extraction, scoring, and reporting automation).
